

## **NOVA GUARD LAYOUT by Matsui**

The MATSUI Group are pleased to announce the release to market of their latest innovation in specialist casino table layout manufacture with the launch of NOVA GUARD LAYOUT.

The NOVA GUARD LAYOUT by Matsui ensures any part of the table layout cloth that comes into human contact in the casino is antimicrobial, therefore stopping the growth or spread of microorganisms. It has an identical feel, weight and quality finish that has come to be associated with Matsui Synthetic Layout but with antimicrobial material added in the textile at the production stage whilst still allowing game / graphic designs uniquely tailored to your casino.

Shigeki Machida, Managing Director of Matsui Asia commented “We are very excited to introduce our NOVA GUARD LAYOUT. Since the start of the global pandemic, we have worked very hard and continued to invest, develop and prepare our anti-microbial gaming products. Following our very successful NOVA GUARD CHIPS, we have now finally completed our latest NOVA GUARD LAYOUT. “

“Unlike the similar products already in the marketplace which have only the surface of the cloth sprayed or coated by anti-viral solution; NOVA GUARD LAYOUT contains antimicrobial material woven into the fibre. By producing the layout in this way means protection for not only a short period of time, but instead constantly during the full period of use for your layout and giving a sanitized and safe environment at your gaming tables.”

“Whilst we are still not able to see the end of pandemic, to protect gaming staff and players in the fight against COVID-19 this is one of the most practical protections that a casino operator can have in place at their gaming tables. As many experts predict that another pandemic may happen in the not-too-distant future, we are confident that our NOVA GUARD LAYOUT will become the new standard of casino layouts.”

Please contact your local MATSUI sales for further details.
